Weekly Report – Week 2

Overview

During this week, I focused on building the frontend functionality for user authentication and profile access. Additionally, I attended two workshops that contributed to my understanding of product management and technical tools.

Daily Activities

Monday

- Set up the initial frontend structure in React.
- Implemented login form components and styled them with consistent UI.
- Participated in the **"AI Assisted Product Management"** workshop.

Tuesday

- Integrated the login logic to allow users to authenticate.
- Added validation for input fields.
- Participated in the **"Git and Docker"** workshop.

Wednesday

- Worked on the Profile page layout.
- Implemented basic profile UI where users can access their information after login.

Thursday

- Gained insights into how AI tools can enhance decision-making in product development.

Friday

- Learned best practices for version control workflows and containerization.
- Finalized and polished the Profile page frontend.

Completed Tasks

- Developed the frontend in React for user login.
- Built the Profile page for authenticated users.
- Attended two workshops:
    - AI Assisted Product Management
    - Git and Docker

Milestones Reached

- Delivered a working login flow on the frontend.

- Created a functional profile interface accessible after authentication.

Contributions to Team/Project

- Contributed to the user authentication flow by implementing the login UI and profile page.

- Enhanced the project's frontend with responsive design and better user accessibility.

Training and Workshops

- **AI Assisted Product Management** – learned how to leverage AI in product lifecycle management.

- **Git and Docker** – gained hands-on understanding of effective version control and containerization.
